

Project: Table Form Specifications

Curiosity and Exploration Inventory (CEI-II)

Instructions: Rate the statements below for how accurately they reflect the way you generally feel and behave. Do not rate what you think you should do, or wish you do, or things you no longer do. Please be as honest as possible.

		Very Slightly or Not At All	A Little	Moderately	Quite a Bit	Extremely
1.	I actively seek as much information as I can in new situations.	☐	☐	☐	☐	☐
2.	I am the type of person who really enjoys the uncertainty of everyday life.	☐	☐	☐	☐	☐
3.	I am at my best when doing something that is complex or challenging.	☐	☐	☐	☐	☐
4.	Everywhere I go, I am out looking for new things or experiences.	☐	☐	☐	☐	☐
5.	I view challenging situations as an opportunity to grow and learn.	☐	☐	☐	☐	☐
6.	I like to do things that are a little frightening.	☐	☐	☐	☐	☐
7.	I am always looking for experiences that challenge how I think about myself and the world.	☐	☐	☐	☐	☐
8.	I prefer jobs that are excitingly unpredictable.	☐	☐	☐	☐	☐
9.	I frequently seek out opportunities to challenge myself and grow as a person.	☐	☐	☐	☐	☐
10.	I am the kind of person who embraces unfamiliar people, events, and places.	☐	☐	☐	☐	☐

Stretching: 1,3,5,7 / Embracing: 2,4,6,8,10.

Name

Street Address

City, State, Zip

Organization

I am most creative:

☐ in the morning

☐ in the afternoon

☐ in the evening

The French have a poignant term for the kind of learner such schooling tends to produce: the bon élève, which the great mathematician Benoît Mandelbrot once defined as "a student with good grades, no depth, and no vision."

Our world is too complex, our problems too intricate, our opportunities too vast to settle for such narrow aspirations. It is no longer enough merely to create dutiful students who amass credit hours, credentials, and cynicism about learning while governments topple, economies melt down, and many people lack the basic necessities.

— W. Gardner Campbell December 28, 2011

Submit

I know how to...

Tables allow you to organize row/column data on the page.

Forms allow you to get information from the user.

This project will combine both in creating a nice looking contact form.

This project will demonstrate that I can:

Tables

- Create tables on a web page with headings, rows, and column.
- Use tables inside of tables to give me more control.
- Span multiple columns for headings and text descriptions.
- Use CSS to make my tables look interesting and more readable.

Forms

- Use text boxes, radio buttons, drop boxes, and buttons to collect information from users.
- Use the action=" " attribute in the <form> tag to tell the browser what to do when the user clicks the submit button.
- Use the enctype=" " attribute in the <form> tag to tell the browser how to format the information.
- Use the <label>, <fieldset>, and <legend> elements to improve the accessibility of every form I create.
- Use CSS to make form elements look interesting and more readable.

File Management

1. Create a folder named **prjTableForm** (Do not use file extensions when naming your folders!)

- This is the folder that you will zip up and submit to your instructor.
- You will be using this folder to hold:
 - The HTML files: `prjTableForm.html`
 - The external CSS file if you used one.
 - A subfolder named "graphic" holding any graphic files used by this page.

Two Gotchas

1. Beware of double extensions!

Make sure your files extensions are all displaying when setting up these files! Don't know how? Go back through the Learning Activities to learn how. Or, use Google: "the name of your Operating System" "show file extensions"

2. Follow the naming conventions so all your file names are consistent.

Remember that the t.server is case sensitive. UPPER/lower case matter!

Forgot the naming conventions? Here they are:

- Always start with a lower case letter
- useCamelCaseToHelpReadability
- Don't use spaces or underscores
- Don't use plurals
- Be consistent - Follow these rules for all folder names and filenames.

Specifications

Create this form as a web page form using tables inside of tables to arrange the sections.

Use the graphic as a guide using CSS to style the page for readability.

Your goal is to create a visually pleasing web form that is useful and easy to use.

Using established design principles, use a single font-family for the text to unify all the elements on the page. So many different fonts is confusing to the person completing the form.

You can change the vertical text into numbers 1-5. Make sure you add some text in the instructions telling the user what each number stands for.

The Tables

- Utilize `<table><tr><td>` to form the tables.
- Use `colspan` for the Instructions at the top of the table, the references after the checklist and the overview paragraphs in the bottom table.
- Utilize CSS to change the appearance of the tables including the font, background, font color, and borders. To make your form match other pages on your site you may use an external CSS file.
- For CSS code specific to this page, include that in the `<head>` element of the page (after the external `.css` is linked.)
- Use CSS to add zebra striping to the background of checklist items. (Use very light colors. Be subtle, not SUBtle.)
- Use tables inside of tables for greater layout control.
 - The name/address/city,state,zip/organization labels and text fields should be a table (2 col x 4 rows) inside a larger table containing the submit button.
 - The "I am most creative" text and checkboxes should also be a table (2 col x 4 rows) inside the larger table

The Form

- You should demonstrate using the following form elements
 - Textboxes
 - Radio Buttons
 - Check Boxes
 - Dropdown lists
 - Button(s)
- The dropdown list for Organization should display the following choices:
 - South Central College - North Mankato Campus
 - South Central College - Faribault Campus
 - Minnesota State University - Mankato (MSUM)
- Each form object must have an appropriate prefix (frm, opt, txt, chk, btn) and a descriptive name. For example `optActivelySeek1`, `optActivelySeek2`, `optActivelySeek3`, etc.
- Group similar items on the form using `<label>`, `<fieldset>`, and `<legend>` for better accessibility.

- The <form> element must include the correct attributes to accomplish the following:
 - Give the form a unique name including the prefix: fem
 - Send the data in an email when the "Submit" button is clicked.
 - Format the data in the email in easy to read text on separate lines.

The page must pass the W3C online validation tool without errors.

What to submit to D2L

1. Go through the [Grading Checklist](#) at the end of these specifications to make sure you have everything. This is what your instructor will be using to grade your work.
2. Zip up the folder named prjTableForm (containing prjTableForm.html, any graphic files, the external .css file (if you used one), and any other files you may need to meet the project specifications.
Name this file: prjTableForm.zip
3. Submit this zip file to D2L.

You will be graded using the files in the dropbox.

Notes & FAQ

Notes

1. This is not part of your published site. You do NOT have to include this project in your 06public_html folder or FTP it out to your site.
2. Be smart! Print out the example form and figure out your form object names before you begin coding.
3. All folder and file names must be as specified. UPPER/lowercase matter. All filenames and folders must follow the naming conventions. Always start with a lower case letter. No spaces and no underlines "_". useCamelCaseForReadability Don't use plurals. File extensions should be lower case.
4. Make sure your text editor changes all TABs to three spaces. Points will be taken if any TABS are found in the code. Do a Google search to learn how to view the visible spaces for the editor you are using. For example: notepad ++ show hidden characters. (See FAQ below.)
5. This project is an evaluation of how well you can use the HTML table and form elements. If this was an assessment of your creativity you would have been asked to build a useable form based on this text and incorporating the given list of form objects and tables inside of tables: Could you do it?

The French have a poignant term for the kind of learner such schooling tends to produce: the bon élève, which the great mathematician Benoît Mandelbrot once defined as "a student with good grades, no depth, and no vision."

Our world is too complex, our problems too intricate, our opportunities too vast to settle for such narrow aspirations. It is no longer enough merely to create dutiful students who amass credit hours, credentials, and cynicism about learning while governments

topple, economies melt down, and many people lack the basic necessities.

What if we took another tack, specifying that students should not only remember information but also demonstrate increased curiosity? Consider, for example, "Curiosity and Exploration Inventory-II," a test devised by a team of psychologists at four US universities (see the Journal of Research in Personality 43 [2009] 987-998) to measure a person's level of curiosity. Researchers asked students to rate the extent to which each of these statements describes them:

I actively seek as much information as I can in new situations.

I am the type of person who really enjoys the uncertainty of everyday life.

I am at my best when doing something that is complex or challenging.

Everywhere I go, I am out looking for new things or experiences.

I view challenging situations as an opportunity to grow and learn.

I like to do things that are a little frightening.

I am always looking for experiences that challenge how I think about myself and the world.

I prefer jobs that are excitingly unpredictable.

I frequently seek out opportunities to challenge myself and grow as a person.

I am the kind of person who embraces unfamiliar people, events, and places.

FAQ - Frequently Asked Questions

How can I display the column captions vertically?

Keep in mind this isn't a requirement for this project. You can replace the vertical captions with numbers 1-5. Just make sure you include in the instructions (the left side of the heading) a list showing what each number stands for.

But... if you are up to the challenge:

You know this is a display thing, so it will involve CSS.

Do a web search for: CSS vertical text

Here is a site that offers a pretty good solution: <http://scottgale.com/css-vertical-text/>

Do you want _____ on the project?

The instructor will be using the Grading Checklist at the bottom of these specs. If it isn't on the grading checklist then you don't have to include it in your project work.

If it is on the grading checklist and you don't submit it then you will lose points.

If there is an obvious discrepancy, error, or omission, please let the instructor know. But, if not, use the Grading Checklist as your guide.

You might find it helpful if you make the heading a separate table so the vertical text doesn't conflict with the regular text in the table below.

How do I make certain my text editor is changing all TABS into three spaces automatically?

If you are using Notepad++ you will find instructions on how to set up the editor so it always changes TAB characters into 3 spaces.

Look in the Module: Tools under the Learning Activity: Install a text editor on your flash drive. There is a screen shot there showing how to change this setting.

If you are using another text editor do a Google search for: <name of the text editor> change TAB to spaces

To see if you have any TABs in a document use View/Show Symbol/Show All Characters or View/Show Symbol/Show White Space and Tab.

If you are using another text editor do a Google search for: <name of the text editor> show spaces

I didn't use the TAB key but, I still have TABS in my code. Why is that?

Most text editors automatically indent your code using the TAB character. Just by hitting ENTER you may be introducing TABS into your document. (That is why you want to change the setting to automatically change all TABs to 3 spaces.)

If you do have TABs in your document simply use CTRL F (Find) and search for the TAB character and replace it with three spaces. On many systems the /t is the same as hitting the TAB key.

Grading Checklist

Total Points Possible: 50 points

The Tables (25 points possible)

- 5 points - Utilize <table><tr><td> to form the tables.
- 5 points - Use colspan for the Instructions at the top of the table, the references after the checklist and the overview paragraphs in the bottom table.
- 5 points - Utilize CSS to change the appearance of the tables including the font, background, font color, and borders. To make your form match other pages on your site you may use an external CSS file.
- 5 points - Use CSS to add zebra striping to the background of checklist items. (Use very light colors. Be subtle, not SUBtle.)
- 5 points - Use tables inside of tables for greater layout control.
 - The name/address/city,state,zip/organization labels and text fields should be a table (2 col x 4 rows) inside a larger table containing the submit button.
 - The "I am most creative" text and checkboxes should also be a table (2 col x 4 rows) inside the larger table

The Form (25 points possible)

- 5 points - You should demonstrate using the following form elements
 - Textboxes
 - Radio Buttons
 - Check Boxes
 - Dropdown lists
 - Button(s)
- 5 points - Each form object must have an appropriate prefix (frm, opt, txt, chk, btn) and a descriptive name. For example optActivelySeek1, optActivelySeek2, optActivelySeek3, etc.
- 5 points - Group similar items on the form using <label>, <fieldset>, and <legend> for better accessibility.
- 5 points - The <form> element must include the correct attributes to accomplish the following:
 - Give the form a unique name including the prefix: fem

- Send the data in an email when the "Submit" button is clicked.
- Format the data in the email in easy to read text on separate lines.

5 points - The page validates without errors using the W3C online validation tool.

You may lose points for:

- Not following the naming convention listed in these specs.
- Not naming files exactly as specified.
- Poor spelling, grammar, or capitalization.
- If TABS are mixed in the code. (3 spaces only for indenting lines).
