Experience h3	
Volunteer Work h3	
How the Web Works h2	

Imagine Your Own Web Site

No, not Facebook or a LinkedIn account (although those are important), but your own site showing what you have accomplished. Project work, volunteer work, and classes completed.

This project will get you started in building this web site.

This project will demonstrate the following:

- I am learning how to communicate visually.
- I know how to create and use folders and files correctly.
- I know how to organize files (like graphics and photos) in a sub-folder.
- I can build a basic web page using the proper HTML elements.
- I am able to include graphic images on the page.
- I have a development environment set up that allows me to quickly edit, save, and view the web page in my browser and text editor.
- I know how to use hot keys to work faster. (CTRL c - CTRL v - CTRL x - CTRL a - CTRL z)
- I can validate my HTML code.

This is a suggested layout you could use:

	Malcolm Reynolds h1 Professional Goal h3
Education h3

Volunteer Work h3 	
How the Web Works h2 	

File Management

1. Create a folder named prjWebPage (Do not use a file extension on your folders!) - This is the folder that you will zip up and submit to your instructor.
2. Inside this folder include a file named: index.html
3. Inside the prjWebPage folder create a sub-folder named: graphic All graphic files will be stored in this sub-folder.

Beware of double extensions! Make sure your files extensions are all displaying when setting up these files!

Don't know how? Go back through the Learning Activities to learn how. Or, use Google: "the name of your Operating System" "show file extensions"

Specifications

Create an info-graphic showing how the Web works.

This info-graphic will show your understanding of how files travel across the Web as well as how the Client/Server concept works based on the Learning Activities you have completed. The info-graphic will also demonstrate that you know how to think visually.

1. The file should be named: infoGraphic.png
2. Make certain the image is type .png so it can be viewed in any browser. (MS Word files are not acceptable.)
3. If you use a specialized info-graphic program, look for an "file/export" or a "file/save as" menu item. Make sure you select the file type before you export the image. You can also take a screen shot of your info-graphic.
4. The image should be at least 480x640 pixels in size and no larger than 600x800 pixels
5. Show the 8 steps that a file travels through on its trip to the server and back to the browser.
6. Use different colored arrows to show the client request and then the server response
7. Your info-graphic will be worth 10 points

Create a basic web page.

1. Use the five essential elements in the correct order
2. Include a <!DOCTYPE> statement for HTML5.
3. Include a <meta /> element for charset UTF-8
4. Use the correct HTML elements to create the following objects on the page:
 - Headings
 - Paragraphs
 - Line breaks
 - Horizontal rules
 - Images

- A comment block after the <html> tag including:
 - Name of file and purpose of file
 - Your name, preferred email address, and student ID
 - The date the file was written
 - A revision date updated each time the file is updated.

Add content to the web page.

You should have the following included on your page

1. A heading with your name
2. A professional looking photo of yourself
3. A paragraph describing a professional goal
4. Sub headings listing other information about yourself. For example
 - Volunteer work you have done
 - Hobbies or activities you are passionate about
 - Work history
 - Education
5. The info-graphic you created showing how the Web works.
 - Have a sub-heading describing what the image represents
 - Include an alt=" " and title=" " attribute

Create a Video

Using Screencast-o-Matic create a video following this script.

Please try to keep the video under 2 minutes.

1. Open up your index.html web page in a text editor.
2. Open up the same file in a web browser.
3. Make a change in the text editor and save using the correct hotkey.
(Describe the hot keys you are using)
4. Switch to the browser and display the change.
5. Go back to the editor and cut a line of code using the correct hotkey
(Describe the hot keys you are using)
6. Paste the line of code in another spot in the file using the correct hotkey

(Describe the hot keys you are using)

7. Validate the HTML code showing that you have no errors.

Submit to D2L

1. Zip up the folder named prjWebPage (containing all your files and sub-folders) and submit to D2L.
2. In the notes of this drop box add the link to your Screencast-O-Matic video. (Copy and paste the URL-web address from Screencast-O-Matic into the notes text area in D2L)

Notes & FAQ

1. All folder and file names must be as specified. UPPER/lowercase matter. All filenames and folders must follow the naming conventions.
 - Always start with a lower case letter.
 - No spaces and no underlines "_".
 - useCamelCaseForReadability
 - Don't use plurals.
 - File extensions should be lower case.
2. Make sure your text editor changes all TABs to three spaces. Points will be taken if any TABS are found in the code. Do a Google search to learn how to view the visible spaces for the editor you are using.

Frequently Asked Questions

How can I get a screen shot of my screen?

There are several ways to do this. Go back to the Module: Tools and look at the learning activity "A picture is worth a thousand words."

How do I make certain the file extensions are showing in Windows Explorer?

Go back to the Module: File Management and look in the Tutorial: 5 Flash Tricks.

How do I make certain my text editor is changing all TABS into three spaces automatically?

If you are using Notepad++ you will find instructions on how to set up the editor so it always changes TAB characters into 3 spaces.

Look in the Module: Tools under the Learning Activity: Install a text editor on your flash drive. There is a screen shot there showing how to change this setting.

If you are using another text editor do a Google search for: <name of the

text editor> change TAB to spaces

To see if you have any TABs in a document use View/Show Symbol/Show All Characters or View/Show Symbol/Show White Space and Tab.

If you are using another text editor do a Google search for: <name of the text editor> show spaces

I didn't use the TAB key but, I still have TABS in my code. Why is that?

Most text editors automatically indent your code using the TAB character. Just by hitting ENTER you may be introducing TABS into your document. (That is why you want to change the setting to automatically change all TABs to 3 spaces.)

If you do have TABs in your document simply use CTRL F (Find) and search for the TAB character and replace it with three spaces. On many systems the /t is the same as hitting the TAB key.

How do I validate a web page?

There are several tools you can use to validate your HTML5 code. Look in the Module: HTML for the Tutorial: Validating HTML.

Grading Checklist

Total Points Possible: 55 points

10 points - Create an info-graphic showing how the Web works.

This info-graphic will show your understanding of how files travel across the Web as well as how the Client/Server concept works based on the Learning Activities you have completed. The info-graphic will also demonstrate that you know how to think visually.

1. The file should be named: infoGraphic.png
2. Make certain the image is type .png so it can be viewed in any browser. (MS Word files are not acceptable.)
3. If you use a specialized info-graphic program, look for an "file/export" or a "file/save as" menu item. Make sure you select the file type before you export the image. You can also take a screen shot of your info-graphic.
4. The image should be at least 480x640 pixels in size and no larger than 600x800 pixels
5. Show the 8 steps that a file travels through on its trip to the server and back to the browser.
6. Use different colored arrows to show the client request and then the server response

20 points - Create a basic web page.

1. Use the five essential elements in the correct order.
2. Include a <!DOCTYPE> statement for HTML5.
3. Include a <meta /> element for charset UTF-8
4. Use the correct HTML elements to create the following objects on the page:
 - Headings
 - Paragraphs
 - Line breaks
 - Horizontal rules

- Images including alternative text
- A comment block after the <html> tag including:
 - Name of file and purpose of file
 - Your name, preferred email address, and student ID
 - The date the file was written
 - A revision date updated each time the file is updated.

10 points - Add content to the web page.

You should have the following included on your page

1. A heading with your name
2. A professional looking photo of yourself
3. A paragraph describing a professional goal
4. Sub headings listing other information about yourself. For example
 - Volunteer work you have done
 - Hobbies or activities you are passionate about
 - Work history
 - Education
5. The info-graphic you created showing how the Web works.
 - Have a sub-heading describing what the image represents
 - Include an alt=" " and title=" " attribute

15 points - Create a Video

Using Screencast-O-Matic create a video following this script.

Please try to keep the video under 2 minutes.

1. Open up your index.html web page in a text editor.
2. Open up the same file in a web browser.
3. Make a change in the text editor and save using the correct hotkey.
(Describe the hot keys you are using)
4. Switch to the browser and display the change.
5. Go back to the editor and cut a line of code using the correct hotkey
(Describe the hot keys you are using)

6. Paste the line of code in another spot in the file using the correct hotkey (Describe the hot keys you are using)
7. Validate the HTML code showing that you have no errors.

Points will be taken off for:

- File and folder names are different than the names that are specified.
- HTML errors when page is validated.
- Not following naming conventions.
- Misspelled words, poor grammar, improper capitalization. (In doubt? Use <http://www.paperrater.com/>)
- Files contain TABs instead of 3 spaces. (See the [FAQ](#) in this document to learn how to check your files for TAB characters).
