

# Project: Wordpress

## Specifications

## Specifications

### Install and set up a Wordpress website

30 Total possible points

- 10 points - Install Wordpress out on your t.server.
  - 5 points - Download and install a theme and make it the Current Theme for your site.
  - 5 points - Create a static page with key information about you (or the topic of your website). Make this the home page of your Wordpress installation.
  - 5 points - Write at least three blog entries with information pertaining to the site. It could be a summary of your classes or projects you've completed, etc.
    - Your writing should be professional.
    - Replace any "lorem ipsum" filler text with actual information pertaining to the site.
    - Include at least one video in one of the blog entries using an embed code from a video server such as YouTube or Screencast-O-Matic.
  - 5 points - Create at least one other page and include it as a menu item.
- 

### What to submit to D2L

1. In the D2L Dropbox submit a file named prjWordpress.html file outlining any problems you encountered and how you solved them. This can be as simple as a single heading and an unordered list. (You might want to make the problem bold and your solution in regular text for a positive UX.)
2. In the prjWordpress.html file also include a link to your Wordpress site.

(Be smart and view your blog and then copy and paste the URL so you don't have any typos.)

3. In the Notes section of the D2L dropbox include a URL to your site out on the t.server. (This will be a backup to the link in your HTML page.)
